ELECTRO MECHANICAL SYSTEMS LIMITED

18 January 2024

Dear Customer

REACH (Registration, Evaluation, Authorisation and restriction of Chemicals)

Electro Mechanical Systems Ltd supports the key objectives of REACH and will continue to fulfill our obligations under this legislation.

Electro Mechanical Systems Ltd is both an importer and manufacturer of motors, actuators and electro-mechanical motion control devices but is neither a manufacturer or importer of chemicals.

Any substances (such as lubricant, adhesive etc) contained within the products we place on the market are not intended to be released during normal or reasonably foreseen conditions of use.

Any substances used in the process of manufacturing products at our own manufacturing facility are used for the purposes for which they were intended and in accordance with the controls and precautions required by the manufacturer issued MSDS. Resulting waste is collected, treated, recycled and disposed of according to the requirements specified on the MSDS with appropriate approved waste contractors.

Electro Mechanical Systems Ltd is not obliged to register any substances under REACH, and we have no reason to believe that the substances we use will not be registered by the manufacturers or importers. However, we can confirm that according to our current knowledge, there are no substances listed within the current ECHA Candidate List in concentration levels of greater than 0.1% w/w present in any of the products we supply.

Our suppliers are expected to continuously review the compliance of products they provide to EMS against current requirements of the REACH regulation and notify us if at any time their products fail to meet those requirements. Should this occur, EMS will make all necessary adjustments to ensure that neither the supply nor the quality of the products we supply to our customers is affected.

If you require any further information please contact me at the address below.

Yours faithfully

Ryan Sanderson  
QHSE Manager
